

		Probability ----->				
Severity		Frequent	Probable	Likely	Possible	Rare
	Emergency				Hackers inject malicious code into software through global variables or input.	My Github account gets hacked or broken into.
	Major				The main storage of values can be accessed globally / in the console.	
	Moderate		Lack of unit testing may hide vulnerabilites that persist in the logic of the program.	All code can be viewed in various ways; GitHub and Chrome Developer Tools .	Lack of security policy makes the software more susceptible to threats.	Github Pages could get disabled or shut down.
	Minor				The program files get deleted from personal computer.	
	Negatable				The program files get deleted from Github.	1.My personal laptop gets stolen. 2.My personal laptop gets hacked or broken into.
